

AUTOMOBILE SALES DASHBOARD

(Business Requirement Document)

1. Project Title:

Automobile Sales Dashboard using Power BI

2. Objective:

The objective of this project is to analyze automobile sales data and present meaningful insights using interactive dashboards in Power BI.

3. Problem Statement:

The company has large volumes of sales data, but it is difficult to analyze trends, product performance, and customer behavior manually. A visual dashboard is required for better decision-making.

4. Solution:

A Power BI dashboard is developed to visualize sales data using KPIs, charts, and slicers. This helps in understanding sales patterns, product demand, and regional performance.

5. Data Source:

The dataset used is Automobile Sales Data containing fields such as Sales, Quantity Ordered, Price Each, Product Line, Country, City, Customer Name, and Order Date.

6. Key Performance Indicators (KPIs):

- Total Sales
 - Total Quantity Ordered
 - Average Price per Unit
-

7. Dashboard Features:

Page 1: Overview Dashboard

- Total Sales (Card)
 - Total Quantity (Card)
 - Average Price (Card)
 - Sales by Product Line (Bar Chart)
 - Sales by Country (Donut Chart)
 - Sales by Month (Line Chart)
 - Slicers for Country and Product Line
-

Page 2: Detailed Analysis

- Sales by Country (Bar Chart)
 - Sales by Customer Name (Bar Chart)
 - Sales and Quantity by Product Line
 - Sales by City
 - Price vs Quantity (Scatter Plot)
 - Sales vs Quantity (Scatter Plot)
-

8. Tools Used:

- Power BI
-

9. Conclusion:

The dashboard provides a clear and interactive view of sales performance. It helps identify top products, key markets, and customer trends. The visualizations improve decision-making and business understanding.
